

The background image shows a bright, modern restaurant interior. On the left, there are several tables with white tablecloths and red chairs, with large potted plants on a windowsill. The ceiling features a complex arrangement of gold-colored light fixtures. On the right, a curved bar with a white tiled front and black leather bar stools is visible. The floor is made of light-colored wood planks.

Wow! Taiwan Project

Wow! Taiwan Project selects the most innovative and cutting-edge products and technology solutions from Taiwan. We aim to connect suppliers and buyers all over the world to do business.

Founded by BOFT (Bureau of Foreign Trade) and implemented by CDRI (Commerce Development Research Institute), Wow! Taiwan Project has created a safe online D2B (Direct to Business) platform for buyers and suppliers to exchange and connect, ensuring business growth is guaranteed through customized services.

FoodTech

With the rapid development of technology, food technology is becoming an important field in the food processing industry and the food service industry. Food technology utilizes emerging technologies such as artificial intelligence (AI), Internet of Things (IoT), automation, and more to introduce innovative solutions to the food processing and food service industries, aiming to improve production efficiency, quality, and service standards.

Solution 1

The background of the slide is a faded, high-angle photograph of an automated food processing machine. The machine features a central rotating drum with multiple blades or scrapers, surrounded by various metal components, pipes, and collection trays. The overall scene is industrial and brightly lit.

Automated Food Processing Solution

Taiwan is world-renowned for its customized products, and it can even propose a complete integrated food processing solution, providing and integrating the automated equipment needed in each step of food processing.

You name it , HM makes it.

Established in 1996, Hundred Machinery (HM) is a professional food machinery manufacturer in Taiwan. Years of experiences resulted in solid skills and thoughtful service to our customers. Since 2007, HM has specialized in machines, optional devices and accessories with new functions to make foods with different textures and features. All kinds of dumplings, steamed buns, bakery foods and frozen foods can be produced by HM machines. Since 2012, Hundred Machinery has built a new headquarter to provide our VIP guests around the world with top-quality service. Bringing together famous ingredient suppliers to work together to increase production capacity of our machines, we convened a Dream Team to develop over 15 new products with automated equipment every year, saving customers' costs on product development. With high-quality foods and efficient production by multi-functional machines, we provide turnkey solutions to boost your business!

You name it, HM make it.

HM Automatic Siopao/Hopia/Pandesal Forming Machine can quickly produce a variety of stuffing products and assist customers in making high-quality and delicious products. With multi-functional accessories, it can have diversified and fully automated products while reducing manual work, improving efficiency, and offering safety and hygiene protection.

Award

Ever Pure Applied Materials (EPAM) is a professional manufacturing company of filtration products for various industries including semiconductors, flat panel displays, chemicals, pharma, food, and beverage. EPAM's products are widely used by various industry enterprises, including Sony, UMC, Global Wafters, ASE, AUO, Formosa Petrochemical, Uni-President, Prince-pharma, etc.

Established in Miaoli, Taiwan in 2007, EPAM not just sells products in the brand name of EPAM, but also provides ODM service to design and manufacture filtration products for customers. EPAM is a product-oriented company, investing more than 8% of revenue in R&D every year to develop new products to meet market demands.

In the South East Asia region, EPAM has sales partners in Indonesia, Malaysia, and Singapore. Products are sold to India, Indonesia, Malaysia, the Philippines, and Singapore.

EPAM MCD, MFD, and MPD series filter cartridges are ideally suitable for use in the Food & Beverage Industry. MCD and MPD filter cartridges fulfill all the requirements of the current USP for "Sterile Water for Injection" which includes testing for Toxicity such as extractables according to USP Plastic Class VI Testing.

EPAM filters are halal-certified and used in leading food and beverage companies, such as Uni-President and Heysong.

Best solution in filtration

Therefore, customers have very high requirements for the quality of sterilized filter cartridges. That's why the market still mainly uses filter cartridges from international manufacturers such as Sartorius, Millipore, and Pall.

EPAM completed the development of sterilizing filter cartridges two years ago, and the bacterial filtration efficiency can reach LRV 11 (that is, the removal rate of 99.99999999%), which is in line with the LRV>10 specification of international manufacturers. EPAM products can withstand more than 150 high-temperature sterilization cycles without compromising product reliability.

Due to the reliable product quality, it has gradually passed the verification of Taiwan's major food manufacturers and has been gradually used in beverage and bottled water production processes. EPAM's sterile filter cartridges help customers achieve cost control without sacrificing quality.

Certificate & Patent

Product reliability is the first priority for filter cartridges used in food and beverage, especially at the end of the process, sterilization filtration. During the lifespan of the cartridge, it must ensure that bacteria are completely filtered out. In case of quality problems, customers and consumers will suffer great losses.

Tsung Hsing Industrial Co., Ltd was established in 1965 in the name of "Wan Hsing Food Machinery Co., Ltd." before its name changing in 1979, and has been committed to establishing its own brand "TSHS" since 2015. With 56 years of experience in whole plant equipment planning, we not only provide comprehensive solutions for snack/food, but also assist customers in producing high-quality delicious products.

We strictly control the quality of equipment production and manufacturing, and was awarded ISO9001 certification in 2012, making our machine in compliance with international food hygiene and safety standards. In 2017, the FRYIN-302 fryer won the Taiwan Excellence Award; in 2019, it won the SMEs Rising Star Award. With our innovations, specialized technology, high quality, customized design, food formulation consultation, whole plant production line planning, and integration capability, TSHS has become a global snack food solution expert and representative brand for industrial fryer.

Tsung Hsing has more than 56 years experience of professional food equipment production and manufacturing. In 2020, we upgraded the roadmap to intelligent automation and organized Elite R&D teams to improve equipment, develop technology, and include intelligent production monitoring systems. Using scientific data, Tsung Hsing is able to better meet the needs of the international market and make progress with our customers.

Tsung Hsing served as a consultant for food production equipment, providing integrated solutions for global food factories and central kitchens, including offering advice about transition from traditional manual operation to automation, optimization of production lines, improvement of final product quality and manufacturing environment, and expansion of production lines. For projects such as demand expansion, new investment plans, and new product development, we adhere to the corporate spirit of "innovation, responsibility, trust", and proactively provide comprehensive solutions and whole factory production line planning.

Cost-Effective Powder Handling Processing Equipment

FRYIN-201 is a small-size continuous conveyor belt fryer, featuring its small volume, space-saving, and low energy consumption. It is suitable for large food stores, restaurants, central kitchens, and small-sized food owners who start continuous production.

FRYIN-201 small continuous fryer is able to automatically elevate fume cover and conveyor belt without manual disassembly, which makes it easy to clean and maintain. The continuous fryer for central kitchen adopts gas heating and a constant temperature control system, which allows stable temperature and product quality. Once the fryer is overheating, the fryer emergency protection device will be activated for safety. The restaurant automatic conveyor belt fryer has filtration and slag removal system, which can prolong the oil life and reduce the production cost. Tsung Hsing's FRYIN-201 small continuous conveyor belt fryer can fry food of small amount but of many kinds.

Our fryer can help you to meet the following needs: transition to automatic frying, increasing capacity, shortening frying time, starting continuous production, replacing old equipment, expansion of new production lines, reducing labor costs, improving production environment, and raising product quality.

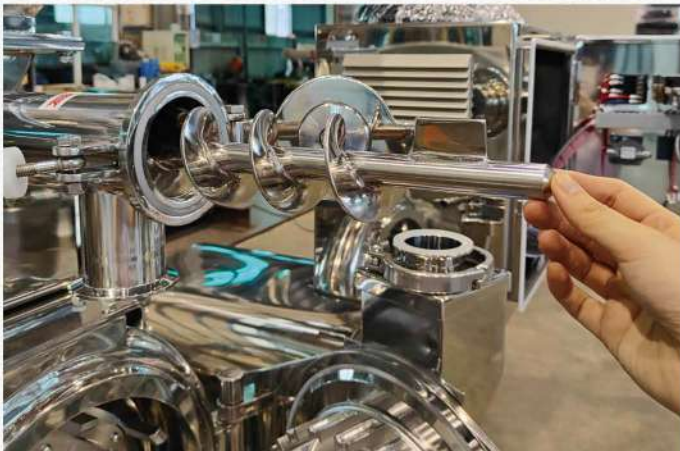

Award & Patent

Mill Powder Tech Solutions (MPT), a professional manufacturer that has abundant experience of manufacturing pulverizers and mixers. Besides, we established secure foundation in Southeast Asian countries, sharing their powder grinding and mixing technologies to the United States and European countries in recent years, and cooperated with well-known major producers in the Middle East, becoming one of local main suppliers.

Cost-Effective Powder Handling Processing Equipment

Pin Mill is suitable to grind crystal and brittle materials. The fineness can be adjusted by filtering-screen and the rotor speed. The Mill can also apply different grind discs for proper materials, and it is easy to clean by water rinse and carry out maintenance.

Nice Packaging Co., Ltd. established in 1995 specialized in automatic packaging machine solution.

▪ **Main products:**

- (1) Primary packaging with single source convenience.
- (2) Secondary packaging & end of line packaging.
- (3) From primary packaging to end of line with conveying system.

▪ **Features services:** Mechanical upgrade support which content equipment modifications and retrofits, process upgrade.

Nice-packaging one stop service solution

We Nice-Packaging co., Ltd. specialized in create packaging machine solution.

We have experienced to cooperate with manufacture who desire assistance that upgrade their production line to the automatically.

Triple R principles are always the Nice Packaging company's core.

Reputation, Reliable quality, Reasonable price.

CTI Machine Co., Ltd., was established in 1985 and specializes in the development, design, and production of custom packaging machines. With years of experience, we have developed a full-directional mechanical integration technology, precision mechanism design and manufacturing, and human-machine interface, PLC programmable control system; leading automation technology, and continued to develop faster and more precise packaging equipment for the raw materials of different industries to increase packaging speed and accuracy of the production line.

With the business concept of humanity, Chin Tai Yi is always client-oriented and design the machines based on the principles of user-friendly operation. All the packaging machines are available for customization in response to different materials and various packaging demands.

User-friendly Automation

High-speed and stable packing equipment, which can collaborated with fully automatic production line to promote unmanned manufacturer system.

Solution 2

A person wearing a white uniform, possibly a chef or server, is holding a handheld electronic device. The background is blurred, showing a white plate and a white cup. The overall tone is professional and clean.

Intelligent Catering Service On-site Solution

In addition to using high-quality equipment to provide good services, it is also possible to introduce intelligent products to reduce the demand for manpower in the field, reduce the workload of ordering and delivery, and allow manpower to focus on providing services to customers.

Founded in 1986, DataVan International Corporation is one of the substantial providers of POS terminal worldwide. With over 30 years of experience, we are now dedicated to build the innovative service environment on a strong foundation.

DataVan products include POS touch terminals, Kiosk self-service systems, modular POS, POS peripherals, and Industrial PC (IPC). DataVan contributes our profession to terminal design, upgrades of IoT ecosystem and cloud framework management.

Supercharge Retail Business Growth with Our Payment Terminal Solutions

As a professional retail equipment manufacturer with over 35 years of experience, DataVan is always dedicated to providing cutting-edge solutions, with advantage of software and hardware integration. "DataVan Smart Restaurant System" offers complete solution adopting cutting-edge retail technologies, such as AI, IoT, big data, ad retail hardware, for food and beverage industry to accelerate ordering and checkout process, which can improve efficiency and customer experience.

With the spirit of "one-stop shopping" service, DataVan Smart Restaurant System offers complete solutions, comprising POS terminal with flexible peripherals, kiosk, KDS (Kitchen Display System), MenuSynnc (AI fast-ordering system), and DataVan Central (IoT device management platform), for various uses. Also, DataVan Smart Restaurant System is highly flexible because its solution package is adjustable based on client needs. Take POS terminal as an example, DataVan can provide over ten types of POS models, including desktop POS and mobile POS, with abundant peripherals and external kits, such as thermal printer, scanner, second display of different dimensions, based on client's budget and the store environment. In addition to POS terminal, DataVan's panel PC is suitable for small POS, KDS, all-in-one POS, ticket machine, or mini kiosk. It shows that DataVan Smart Restaurant System is diversified enough to meet clients' different needs.

The other feature of DataVan Smart Restaurant System is its intelligence. In the system, we adopt AI and OCR technologies to improve menu recognition, as well as IoT and OTA (Over-the-Air) to monitor all devices connecting to the cloud, allowing remote management. DataVan Smart Restaurant System helps enhance customer experience and management efficiency while it can also decrease costs of manpower, operation management, and device maintenance.

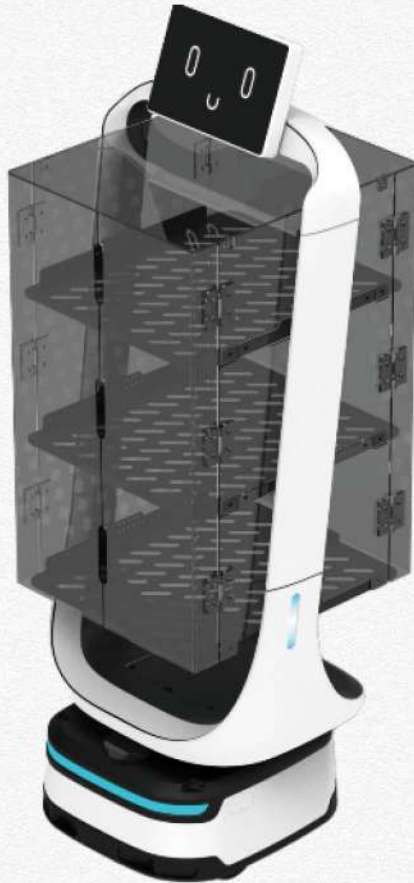

Mobisnet Technology is a leading software developer for Long term healthcare ERP, Web & Mobile Application and robot solution development. We provide a complete solution platform for customers from healthcare, enterprises, retails, commercial and industrial fields around the world.

We are medical system, long-term care system supplier with 20 years of experience, offering a wide range of Robot solutions.

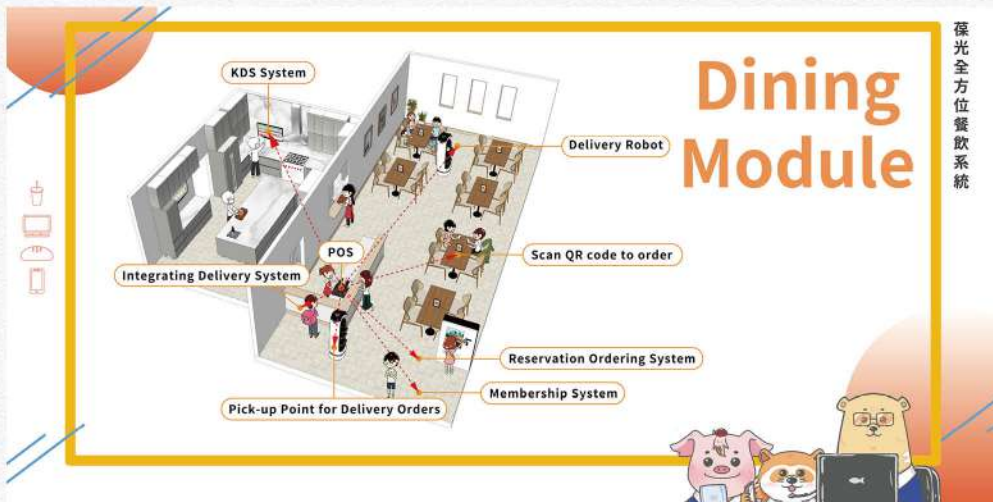

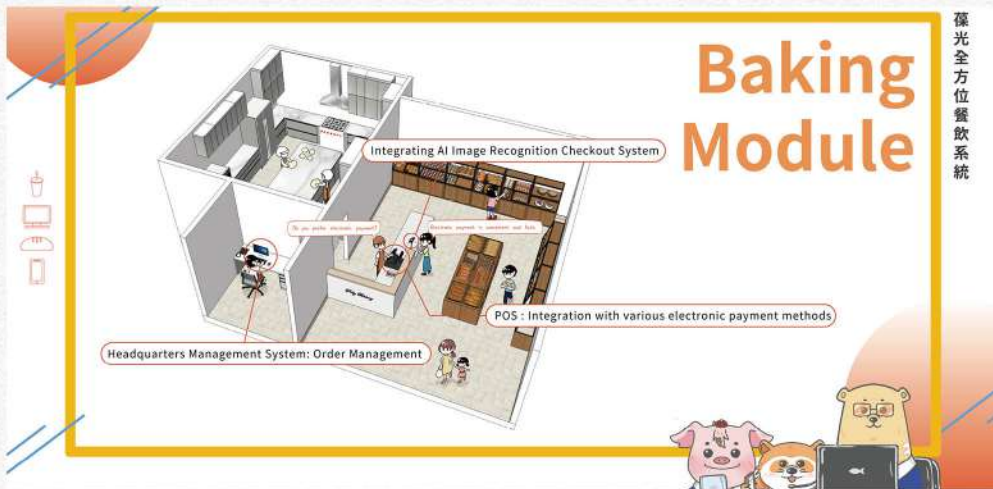

As an artificial intelligence company that builds AI solutions for smart devices and robotics applications, we make professional robots for service.

Complete solutions involve the integration of hardware and software

- 100% made-in-Taiwan Robot
- Modular design
- Cost-saving and easy for maintenance
- User friendly and software customization
- Focus on data security and privacy

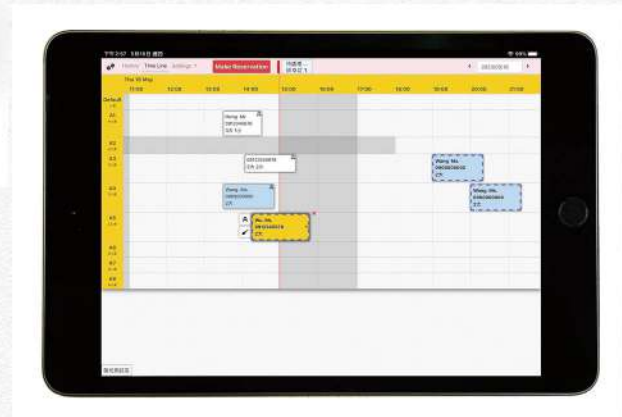

Founded in 2001, we are a leading brand in POS systems for restaurant management in Taiwan with abundant experience and investments in technology. With almost ten thousand systems purchased and installed, our system has been adopted by renowned domestic and international chain groups, which is the driving force for us to move forward.

Our system integrates all data collected from the front and back of house in a restaurant, allowing owners to better control their stores and achieve total efficiency. It also connects to different delivery platforms and membership systems.

We provide a customer service center at 0800, with two shifts operating 365 days a year to address issues online at all times. With six direct service offices in Taiwan, we can quickly dispatch personnel to deal with on-site issues and provide spare equipment when repair is needed, ensuring normal operations as soon as possible.

Inbooking allows you to effortlessly manage customer information.

InBooking is a reservation management system to help our clients and store staff to make reservations, put customers into the waiting list, or lead customers directly to the seat. The system can be operated on multiple devices in real time as long as they connect to the same LAN. The system also allows WAN access, so that the system connected to the LAN can be used in sync on the cloud server.

Solution 3

Automated Kitchen Solution

Use automated equipment to save manpower in the kitchen and optimize the process of meal preparation. The plan includes kitchen equipment, refrigeration equipment, kitchen automation machinery, delivery packaging materials and other products, and different products can be selected according to the needs of the restaurant itself.

QUICKLY FOOD MACHINERY CO., LTD. is a professional manufacturer of commercial food steamer & warmer! With more than 30 years professional experience in this field, we offer CE approved, innovatively designed and patented products.

Our products feature their saving of gas, labor and time.

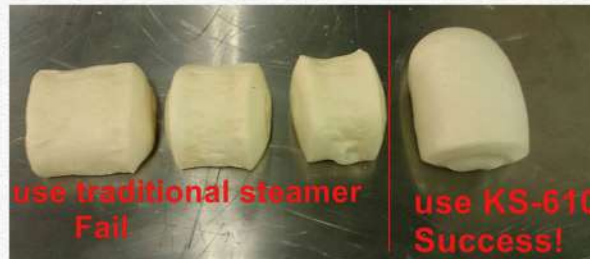

- The patented heating system design heat water and reach its boiling point in 3 minute, which reduces more than 75% of gas consumption than usual water boiling.
- Auto water adding and alarm functions inform you of abnormal water level. Users may preset time and temperature on the digital control panel to avoid accidents, and to ensure food stability and quality.
- Steam is evenly distributed in the oven, creating ideal steaming condition without condensed liquid and ensuring food quality.
- The ten-centimeter thermal-insulation layer makes good heat preservation while the temperature of the external wall will not be dangerously high to people.

Our steamers are available to many kinds of food; for example, rice, noodle, cake, vegetable, meat, potato and bun.
In addition, our steamer can be used for canned food sterilization.

Time Saving, Labor Saving, Gas Saving

- The patented heating system design can boil water in 3 minutes, reducing 75% of gas consumption otherwise.
- Equipped with functions of auto water-adding, time and temperature pre-setting to avoid accidents caused by negligence.
- Two steam model: keep heating/ Temperature Control
- Steam distributed evenly in the chamber, keeping food in its best condition and quality without touch of condensed liquid.
- The ten-centimeter thermal-insulation layer makes good heat preservation, and the surface will not be dangerously hot to people.
- To overcome the problem of dough contraction, maintaining the shape of dough with gluten even after the temperature decreases.
- Long service life, durable rubber seal and adjustable steamer handle make sure no steam leakage.
- Available for fermentation.

"WEJOIN Emaax Service Corp. was founded in July, 1986. Initially, we were devoted to the development of the business and office auto machine, retailing equipment and consumer packaging markets. We worked to provide complete product and service solutions to our clients, which were well-known brands in Taiwan. As part of your success became our success, we would like to thank all our Partners and Clients for their continued encouragement and support.

With the growth in globalization and business markets in recent years, the demand in the packaging field has rapidly increased. Therefore, we use our profession and experience in international marketing to introduce many multi-functional items. Our main products include Emaax Estape, Bag Sealer, Multifunctional Tape Dispenser, transparent mask, Bracode Printer, Handheld Inkjet Printer, Date Coding and labeler, which come from Meto in Germany; Biltz, Jolly and Open from Italy and Emaax.

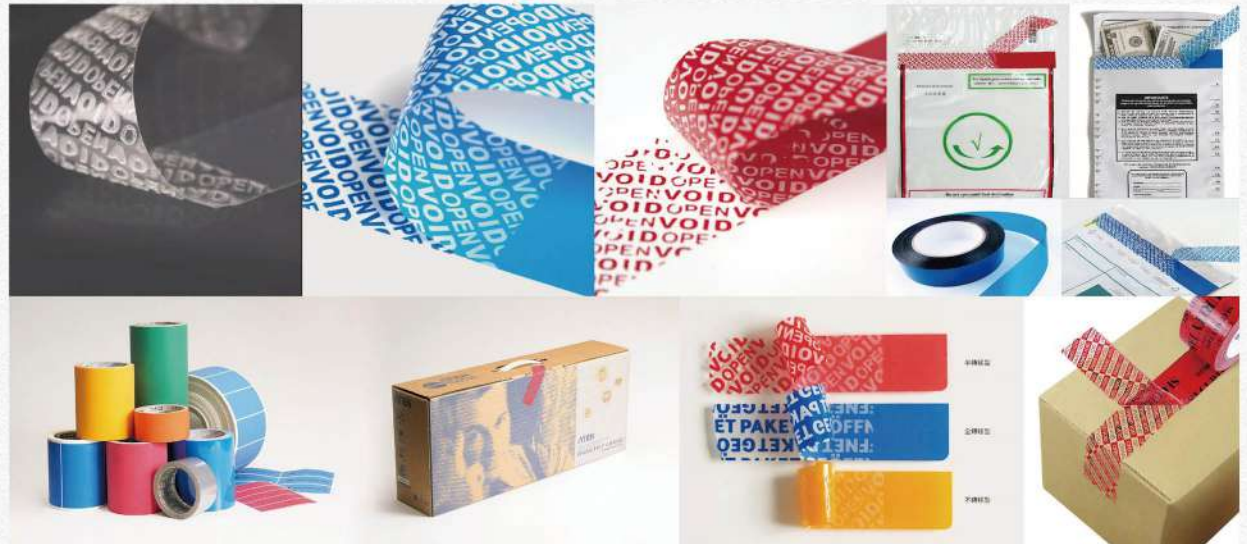

WEJOIN Corp. has a variety of product lines. At WEJOIN, we are proud to provide professional service to our clients in a cooperative honest and respectful manner. We emphasize teamwork and partnership. We make high-quality products that meet our clients' needs, and deeply believe that with our clients' satisfaction at our products and services, we can grow together.

Cost-Energy Professional, Foresight Globe

Different from traditional adhesive tapes which are transparent and difficult to tear off, Emaax opening stickers are small-cut tapes, which need no scissors cutting and save time and labor.

- The tape end is colorful and suitable for packaging.
- The transparency will not obstruct the words underneath.
- Strong viscosity, stick firmly. Suitable for all surfaces and gift packaging.

Our company specializes in commercial refrigeration equipment and provides tailored services to our clients. Unlike standard display equipment which typically offers one setting option for temperature and function, we offer customizable equipment that can be designed to meet clients' brand image, preferences, and sales requirements. Our equipment features specially-designed appearances, one stop with multiple sales modes, and various temperature settings.

Our main clients in Taiwan include department stores, chain supermarkets, chain bakeries, boutique wine shops, and renowned restaurants. We also export our products to more than twenty countries, focusing on chain bakeries and supermarkets.

Super Quality, Super Service

With more than 40 years of experience in the refrigeration industry, Supermax manufactured refrigeration equipment with superb craftsmanship.

Klub is the designer and manufacturer of the first Teapresso machine in the world. Teapresso is a tea brewing method especially for new tea drinks, re-defining tea brewing with a fast and standardized process and format.

Keep Life Ultra Beautiful

Both Klub's Teapresso Machines and Bulk Brewing Machine can control temperature, time and water volume precisely to meet the best conditions for brewing tea. Their advantages can help chain stores to buide standardized process, make differences from other brands, reduce manpower costs, precisely control materials, cut down costs, raise average revenue per unit, increase franchises profits, speed up new products development, accelerate store opening and its efficiency, and polish store image.
